

AI Strategy Accelerator

Mesh-AI baselines your AI readiness across people, process and technology. Our AI Strategy Accelerator identifies the areas within your organisation that require the most attention and have the biggest opportunities for AI impact within your business.

How It Works

Our AI strategy accelerator is executed using proven frameworks and consulting tools that enables us to understand an organisation's current state of AI readiness and provide them with a roadmap so they can establish and realise a vision for how AI will operate within your business over the course of 4-6 weeks.

As part of our engagement we use our Data & AI Readiness Application (**DARA**) which enables us to determine the most ready parts of your organisation to embrace AI-driven transformation. This enables us to perform intra-team, inter team and cross industry peer analysis with organisations across your sector.

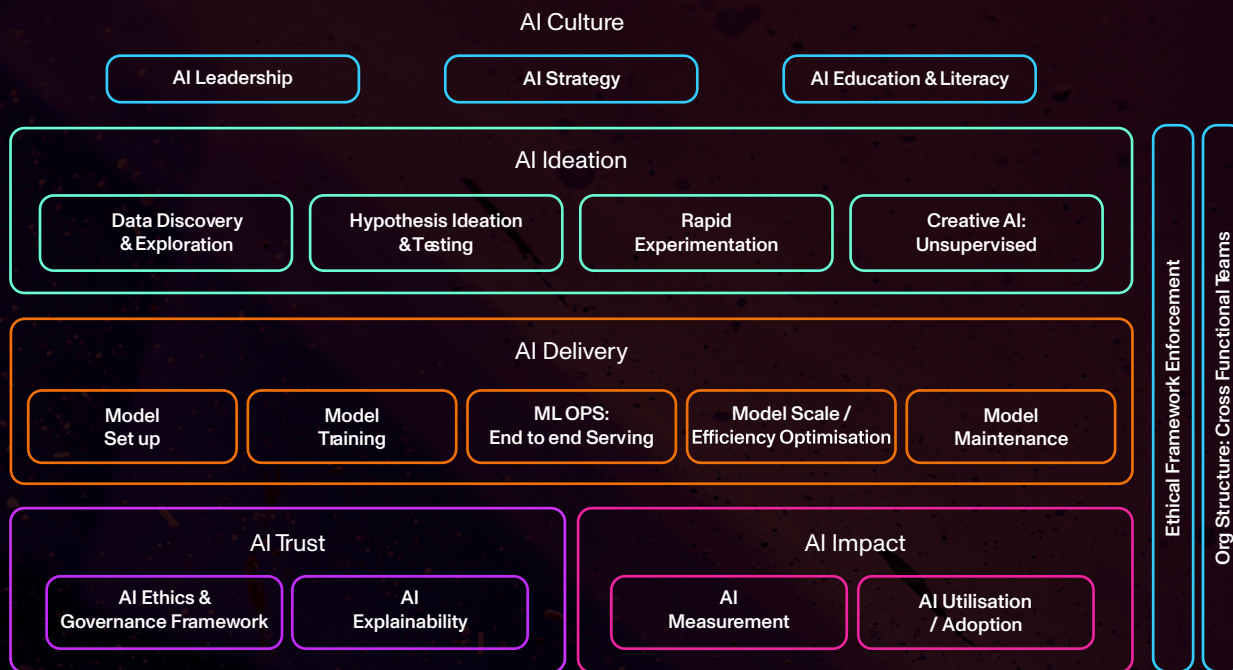

What We Will Do

- Baseline existing AI readiness using our Data & AI Readiness Application.
- Assess the end to end lifecycle of AI use cases within your business, identifying the people, process and technology changes required to scale AI safely and securely within your business.
- Map out a future state vision that will describe your organisation's approach to deploy AI-enabled services and solutions into production.
- Build a roadmap for joint delivery and establish a vision for how AI will add a positive impact so you can make money, save money and reduce risk.
- Help you identify and establish a backlog of AI-driven opportunities that are ratified in respect of feasibility, desirability, and complexity to deliver.
- Establish just enough design around the future operating model and the transition states you should follow as part of a strategic roadmap.

Outcome

Our AI strategy accelerator will benchmark your current state capabilities so you can truly understand the gaps that exist across people, process and technology in your business for scaled AI adoption. We map this to key business outcomes, initiatives and compelling events, so we can have a tangible roadmap aligned to business value.

The Pillars of an AI Strategy

This Will Enable You To:

- Gain a holistic view on the key areas of opportunity for AI across your business, highlighting key bottlenecks and solutions.
- Connect your AI strategy to the wider organisational structure, key business outcomes and value drivers.
- Establish a vision and plan that explains how AI will reimagine how your business operates.
- Identify quick wins and compelling use cases that enable your organisation to safely and securely scale AI into production.
- Educate the business to increase their AI literacy in order to further identify future AI use cases and opportunities.

Are you AI Ready?

DARA identifies strengths, areas for improvement, and allows you to track your progress over time. It's time for you to get your business data and AI ready.
