

# Generative AI Strategy Accelerator

Mesh-AI baselines your AI readiness across people, process and technology. Our Generative AI Strategy Accelerator identifies the areas within your organisation that require the most attention and have the biggest opportunities for Generative AI impact within your business.

## How It Works

Our Generative AI strategy accelerator is executed using proven frameworks and consulting tools that enables us to understand an organisation's current state of AI readiness and provide you with a roadmap so you can establish and realise a vision for how Generative AI will operate within your business over the course of 4-6 weeks.

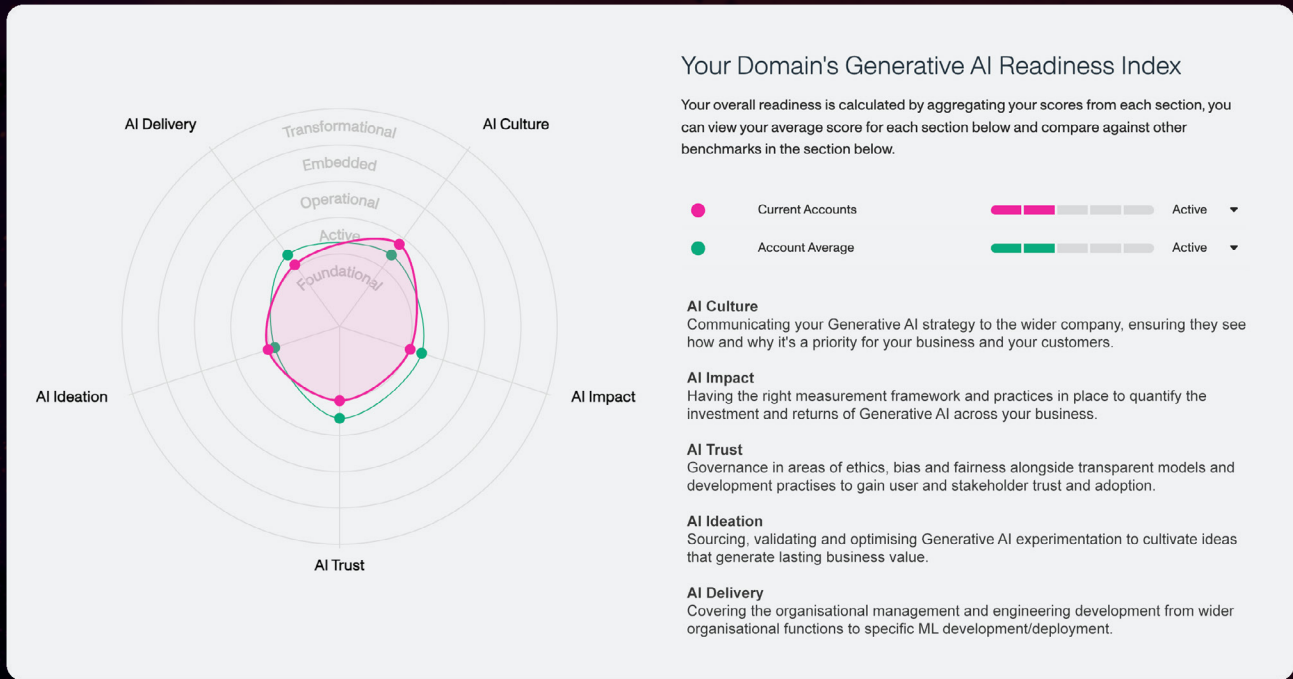

As part of our engagement we use our Data & AI Readiness Application ([DARA](#)) which enables us to determine the most ready parts of your organisation to embrace Generative AI solutions and services. This enables us to perform intra-team, inter team and cross industry peer analysis with organisations across your sector.

## What We Will Do

- Baseline existing Generative AI readiness using our Data & AI Readiness Application.
- Assess the end to end lifecycle of Generative AI use cases within your business, identifying the people, process and technology changes required to scale Generative AI safely and securely within your business.
- Map out a future state vision that will describe your organisation's approach to deploying Generative AI-enabled services and solutions into production.
- Build a roadmap for joint delivery and establish a vision for how Generative AI will add a positive impact so you can make money, save money and reduce risk.
- Help you identify and establish a backlog of Generative AI-driven opportunities that are ratified in respect of feasibility, desirability, and complexity to deliver.
- Establish just enough design around the future operating model and the transition states you should follow as part of a strategic roadmap.

## Outcome

Our Generative AI strategy accelerator will benchmark your current state capabilities so you can truly understand the gaps that exist across people, process and technology in your business for scaled Generative AI adoption. We map this to key business outcomes, initiatives and compelling events, so we can have a tangible roadmap aligned to business value.

### This Will Enable You To:

- Gain a holistic view on the key areas of opportunity for Generative AI across your business, highlighting critical bottlenecks and potential solutions.
- Connect your Generative AI strategy to the wider organisational structure, key business outcomes and value drivers.
- Establish a vision and plan that explains how Generative AI will reimagine how your business operates and delivers value to customers.
- Identify quick wins and compelling use cases that enable your organisation to safely and securely scale Generative AI into production.
- Educate the business to increase their Generative AI literacy in order to further identify future use cases and opportunities.

Are you Generative AI Ready?

**DARA** includes a specific Generative AI readiness index. This enables our customers to identify strengths, areas for improvement, and allows them to track your progress over time as Generative AI is further embedded in your business.
